Rio Conventions Pavilion, hosted in the GEF Partnership Pavilion (Exhibit Area H, next to the UNFCCC Momentum for Change Pavilion)

UNFCCC COP24, Katowice
6th December 2018
10:00 – 13:00

1-Private sector leadership forum: funding, strategies and opportunities.

This event will hear why leading multinationals believe green growth is an opportunity, and offer the chance for audience members to learn more from top industry practitioners in a workshop environment.

2- Driving climate innovation in developing countries

This will be an action-oriented event demonstrating the potential of private-sector-led climate innovation in developing countries. Emerging market climate businesses and entrepreneurs driving innovation in their countries will join multinational companies and financial innovators dedicated to sustainability and active in developing markets.

Developing countries now have a tremendous opportunity to grow new, climate-smart industries, such as renewable energy, climate smart agriculture, and resilient infrastructure. A focus on innovation and greater private sector involvement in these dynamic sectors can leverage significant capital flows, create jobs and spur economic growth. There is an opportunity now to go beyond discrete support and bring promising ideas, businesses, and industries to global attention, and to scale.
