

Office of Emergency Management Town of Dublin

Tom Vanderbilt, Fire Chief and Emergency Management Director

POWER OUTAGE SAFETY TIPS

The Town of Dublin's Office of Emergency Management has issued information regarding safety precautions to be taken during power outages.

“Severe winter weather, including heavy wet snow, sleet, freezing rain and high winds, has the potential to cause power outages throughout the Town,” warns Chief Vanderbilt. “The weight of a one-half inch build-up can be enough to snap tree limbs, causing them to fall and bring down power lines disrupting electrical service.”

Check flashlights and portable radios to ensure that they are working, and that you have extra batteries. A radio is an important source of weather and emergency information during a storm.

Have sufficient heating fuel, as regular sources may be cut off. Have emergency heating equipment and fuel (a gas fireplace, wood burning stove or fireplace) so you can keep at least one room livable. Be sure the room is well ventilated.

If your water supply could be affected by a power outage (a well-water pump system), fill your bathtub and spare containers with water. Water in the bathtub should be used for sanitation purposes only, not as drinking water. Pouring a pail of water from the tub directly into the bowl can flush a toilet.

If pipes freeze, remove insulation, completely open all faucets and pour hot water over the pipes, starting where they are most exposed to the cold. A hand-held hair dryer, used with caution, also works well.

Set your refrigerator and freezer to their coldest settings (remember to reset them back to normal once power is restored). During an outage, do not open the refrigerator or freezer door. Food can stay cold in a full refrigerator for up to 24 hours, and in a well-packed freezer for 48 hours (24 hours if it is half-packed). If you have medication that requires refrigeration, check with your pharmacist for guidance on proper storage during an extended outage.

In order to protect against possible voltage irregularities that can occur when power is restored, you should unplug all sensitive electronic equipment, including TV's, stereos, VCR's, microwave ovens, computers, cordless telephones, answering machines, and garage door openers.

Review the process for manually operating an electric garage door.

If you lose your heat, seal off unused rooms by stuffing towels in the cracks under the doors. At night, cover windows with extra blankets or sheets. Food provides the body with energy for producing its own heat.

Check with elderly or disabled relatives and neighbors to ensure their safety.

Be extra cautious if you go outside to inspect for damage after a storm. Downed or hanging electrical wires can be hidden by snowdrifts, trees or debris, and could be live. Never attempt to touch or move downed lines. Keep children and pets away from them.

Do not touch anything that power lines are touching, such as tree branches or fences. Always assume a downed line is a live line. Call your utility company to report any outage-related problems.

Make sure you always have a well-stocked “Winter Home Emergency Supply Kit” that includes flashlights, a portable radio, extra batteries, a first aid kit, bottled water, non-perishable food and a manual can opener.

For more information, please call the Dublin Fire Department at (603) 563-8137. We will return your call as promptly as possible.
