

# SPIRAL SEPARATOR

As a soybean or canola seedsman your primary concern has to be profit. That means increased capacity, efficient removal of all impurities including misshapen seeds, and improved vigor and germination of a seed lot.

The AMOS spiral gives you that profit. In fact, no other soybean or canola cleaner comes close to matching the overall performance of the AMOS spiral. Independent University tests have shown that the AMOS spiral separator easily cleans up to 300% more seed than conventional spirals. Plus, since each seed lot differs, you can fine-tune your spirals for precision operations. The AMOS spiral has also proven superior in separating corn from beans.

## Features

- Single intake with standard clamp ring.
- Seed divides equally to the two, four or six spirals
- Replaceable spirals; easily replaced when worn
- Rubber lining for long wear, quiet operation and gentle handling
- Sliding baffle plate to allow user to reduce cleanout of flatter varieties
- High capacity- University trial rate AMOS capacity 300% greater than conventional spirals.
- US patents 4146137 & 4207987
