Popular MUTCD and CA MUTCD parking lot and road side signs are stocked in various sizes and grades of reflective sheeting, all on durable .063 aluminum. Additional legends, sizes and alternate grades of reflective material and aluminum substrates are available by special order

Tech notes:

- Most North San Diego county municipalities require the use of High Intensity Prismatic (HIP) reflective or better for any signs within the public right-of-way.
- Engineering Grade Prismatic (EGP) signs are great for parking lot use, where the additional brightness of more expensive reflective materials is not necessary.
- About our part numbers:

  R1-1-3030-EGP (sample number)

  R1-1 is the official sign designation

  3030 is the size of the sign in inches

  EGP is the grade of reflectivity; **EGP** Engineering Prismatic Reflective, **HIP** High Intensity Prismatic reflective and **DG** for Diamond Grade reflective.
