Many sizes of extruded and .125" flat street name sign blades in bare aluminum, High Intensity Prismatic (HIP) and Diamond Grade (DG) reflective are stocked for timely turn around on street name sign orders.

Tech notes:

- Bare aluminum and white reflective street name blades are available for resale.
- Bare aluminum blades can be sheeted in Engineering Grade (EG) or Engineering Grade Prismatic (EGP) reflective for projects not requiring the more reflective grades of material we stock.
- For maximum longevity, we use top quality cut vinyl graphics under most circumstances. Durable, long lasting print graphics using oil based inks are reserved for logos and seals, and where odd colors or complex designs are required.
- 3M 1160 anti graffiti film can be added to any sign at an additional charge.
- A very complete line of sign mounting hardware to fit almost any application is also stocked.
- Custom profile flat, and box style blades are avialable by special order.
