

**InfoPreserve Innovative Document Management Software  
Integrates with Microsoft Outlook**

*Enhanced capabilities for Microsoft Outlook documents for retrieval; digital asset search*

**ROCHESTER, N.Y. – May 18, 2013** - InfoPreserve, Inc. announced the integration of Microsoft Outlook with InfoPreserve’s Watchfolders today as part of the software’s core platform. The Rochester-based supplier of document storage and cloud management solutions implemented the option at the urging of customers, said John Chapman, CEO of InfoPreserve.

“Our customers and partners want this feature to leverage their investments and digital assets by providing a single place to capture, retrieve and share documents with the right level of access controls and security,” Chapman said. “Our patented technology, coupled with the integration of Microsoft Outlook, is key to customer growth and asset protection.”

The InfoPreserve Watchfolders feature allows users to pull emails and attachments into the system from Microsoft Outlook with IP Upload Agent. Added to the existing digital file and scanned paper document uploading capability, the feature creates a common repository making information instantly accessible, retrievable, and sharable.

**About InfoPreserve**
