**FOR IMMEDIATE RELEASE**

**Medical Resources Management Signs with InfoPreserve**

*Medical Resources Management utilizes InfoPreserve's solution to streamline and improve their bottom line for healthcare*

**ROCHESTER, N.Y. – February 28th, 2013** – Medical Resources Management, a growing healthcare processing company based in Rochester NY, utilizes new technologies to support groups of practicing physicians and health care providers with cutting edge solutions for a rapidly evolving industry. Jason Rosenberg, President, MRM searched for years to find a robust solution that could deal with their daily deluge of client documents and files and efficiently direct them to the right departments. The key issue was the large amounts of claim forms, billing statements, payment checks, and related forms had to be individually and manually reviewed to direct them for processing and reconciliation.

Adopting InfoPreserve's Private Cloud-based content management solution has allowed MRM to reduce the time spent scanning and inputting data by 30-60 minutes per day. The InfoPreserve central repositories, watch folders, and forensic search capabilities quickly and easily organize, manage and make all files searchable, allowing MRM to find files and information in seconds. Documents are uploaded directly from the watch folders and organized for review without the labor intensive assessments. The product has been so successful that MRM is moving all of their own business, financial, legal and HR records to the InfoPreserve private cloud.

Because InfoPreserve requires no additional equipment or software, MRM was up and running in fifteen minutes, allowing them to realize immediate savings and ROI that day. The time savings from the scanning alone was enough to cover MRM's annual subscription within the first month. With extensive security system protocols and robust reporting capabilities, InfoPreserve is perfectly suited for the job. InfoPreserve - searchable, secure, and simple.

“We are extremely excited about working with a great company like MRM to enhance and streamline their operations with our robust solution,” said John Chapman, CEO of InfoPreserve.
