Expeditors®	Exel

CMS WorldLink™
Generation Xi

About CMS WorldLink

CMS WorldLink™ is a state-of-the-art web-based multi-carrier enterprise shipping application designed to address the shipping needs of both small and large businesses. This robust and fully scalable solution is equally suitable in a single warehouse environment as well as multiple distribution centers located throughout the world.

CMS WorldLink operates easily with any host application including SAP, Oracle Financials, JD Edwards and ERP system. The ability to share shipping information with other applications eliminates repetitive data entry, reduces errors, improves service and provides immediate shipping information company-wide.

CMS WorldLink provides you with the power to manage and maintain all shipping points via a single application. Centralizing shipping history reports, location cost reporting and carrier rules will significantly improve efficiency and establish a standardized global shipping process regardless of location(s).

Designed With Today's Most Advanced Technologies

ADO.NET, ASP.NET, C#, HTML, Visual Basic Scripts, Crystal Reports, n-tier architecture, Microsoft WinSocket Connections, Web Services and Visual Studio.

Benefits

Multi-Carrier Shipping System
Automatically compare carrier rates, routes and delivery options.

Rating Engine Independence
Flexibility to choose between a built-in, third party rating engine or the carrier-supplied compliance engine.

Free up Internal Resources
Eliminate time spent programming, developing, managing integrations and maintaining constant carrier updates.

Ease of Use
Customize shipping process screens to fit the needs of individual users.

BlackBox Capabilities
Enable existing business systems to perform address corrections and rate, ship and track, maintaining branding and existing look and feel using CMS BlackBox APIs.

Cost Control
Review delivery productivity, monetary and/ or operational productivity and more using powerful reporting and statistics of Key Performance Indicators.

Increase Employee Productivity
Process orders via Batch processing with just a click of a button.

Variable Business Rules
Using Business Rules Automation, business rules can vary depending on the assigned stations, users and sites, all within the CMS WorldLink framework.

Database Flexibility
CMS WorldLink supports Oracle, Windows Servers and Microsoft SQL Server databases.

> "We chose CMS for its flexibility, it allows us to onboard carriers much easier than our previous software"
