

Your kids are safe online at school.

Now keep them safe online at home.

OpenDNS

Your child's school has chosen OpenDNS to keep its students safe online. The free service makes it easy to **block MySpace, Facebook, YouTube, adult sites, gaming sites** and more.

To keep your kids surfing safely at home, their school recommends you take 2 minutes to set up OpenDNS on your home computers.

“ OpenDNS is exactly what I was looking for — like so many families we were starting to lose control of Internet browsing safety because our children are growing up, using laptops for homework, using browsers on their phones with our home WiFi network, and even game consoles to access the web. I was beginning to worry how on earth I could manage the problem.

Then I came across OpenDNS. It was really easy to set up with my router and it limits access on every device in my home, including computers, the Xbox, the Wii — which is superb. Set it up now and make your life easier.”
