THE FIRST CUPFUL OF RADIOACTIVE WASTE
On December 2, 1942, scientists achieved the world’s first self-sustaining nuclear chain reaction at the Fermi reactor on this site at the University of Chicago. The Atomic Age was born — and so was radioactive waste. The Chicago conference marks 70 years since the first cupful of radioactive waste was generated. No permanent safe location or technology has ever been found — and may never be found — to isolate radioactive waste. (For more, see the Pamphlets section at www.beyondnuclear.org)

Persons with disabilities who may need assistance should contact the Office of Programs & External Relations in advance of the program at: (773) 753-2274.
