

To Our Elected Officials:

The safety of St. Louis' drinking water depends on YOU !!

Radioactive wastes at West Lake Landfill threaten drinking water. These nuclear weapons wastes are contaminating the groundwater in the **floodplain of the Missouri River** — the water that many of us drink.

These radioactive wastes threaten our health. Exposure to radiation can cause birth defects, cancer, and genetic mutations. West Lake wastes contain some of the most dangerous materials on Earth.

These wastes must be removed. They will continue to release radioactive particles and rays virtually forever. Heavy rain, a flood, or a fire could increase the spread of the wastes. Unless removed, these wastes also threaten the economic health of our St. Louis region.

Our elected officials can and must protect St. Louis' drinking water, land, and air by transferring responsibility to the U.S. Army Corps of Engineers for the removal of the nuclear wastes. OVER ->
