FAQ's

How much does it cost to dig a well? The cost varies greatly depending on how deep and through what sort of rock or soil the well must be dug, but typically \$10,000 to \$15,000. When you divide the cost of a well by the number of people who use it, the average cost is about **\$100 per person for life**.

What if I have to drink milk? By all means, do so. But if you can give up milk for 2 weeks, that might be another several dollars toward the saving of another life.

What if I usually buy bottled water? Buy one. Then just for 2 weeks inconvenience yourself by continuing to refill it.

Can I keep drinking my usual stuff, but just make a donation? That's OK. It will still help the needy, but you will miss out on the experience of sacrificing for others, and that's a big part of The H2O Project.

How much of the money goes to fund the expenses of the H2O project? 100% of the money you donate goes right to Water for Sudan. If you'd like to contribute to The H2O Project, please see below.

Can I donate directly to The H2O Project? Yes! If you would like to defray the cost of supplies, we'd love for you to do so. (It costs us about \$0.20 per person.) Just write on the memo line of your check, "H2O Supplies." Please consider making this a separate contribution above and beyond what your 2 week sacrifice generated.

What if I forget and drink a soda? No problem. Just start again.

How do I contribute? Just click [here](#).

Any questions? You can get in touch with The H2O Project. Just click [here](#).
