We are pleased to announce that the first Standard Offer Program Provider Projects are on-line!

On May 17, 2018, Lyndonville Solar West 1, a 480 kW solar project and Lyndonville Solar East 2, a 495 kW solar project were officially commissioned. Both projects are located in Lyndonville, Vermont.

Vermont Public Power Supply Authority commissioned the projects after three years of permitting and construction. These are the first utility sponsored projects to be constructed under the Vermont Standard Offer Program.

The Standard Offer Program, established by the Vermont Legislature in 2009, promotes the rapid deployment of small renewable energy projects. For more information on the Standard Offer Program visit: <http://www.vermontstandardoffer.com/>.
