

# InfoSystems Integrated

## xPort Data Extractor for Axys & APX Users

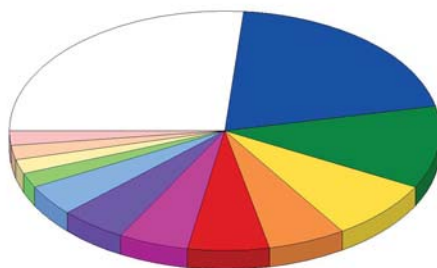

### Simplify Axys and APX data access

ISI created xPort based on the need to extract data from Advent Software's portfolio management products. The software has evolved from experience garnered by extracting data over two decades. In order to build various custom applications for Advent users, ISI has automated data extracts and imports from The Professional Portfolio, Axys (v1-v3), and more recently APX (v1-v3). xPort ports most data from Axys/APX to widely accepted file formats, but additional custom data feeds are also available.

Whether you are considering our Sigma Reporting platform, building your own reporting system, or seeking a data connector to support your third party software, xPort can meet your requirements. Using xPort in combination with Crystal Reports or SQL Server Report Services makes reports like this possible:

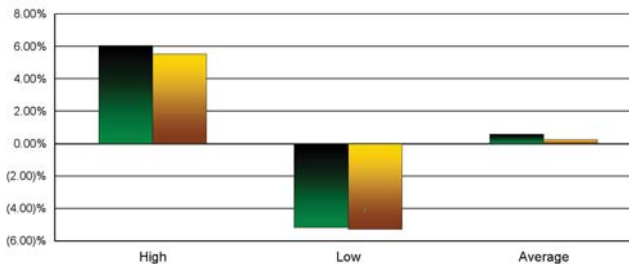

**ACCOUNT OVERVIEW**  
*Mary Client*  
**PAS #123456789**  
*Balanced High Income*
