Acuflo's GM900S manifold meets its match!

Following factory laboratory testing over 2009 and successful field trials over 2010, Acuflo in 2011 released its new CM2000 Composite manifold to the market for general sale.

Acuflo's GM900S bronze manifold has for many years remained New Zealand's most specified and installed manifold. This has been achieved through proven performance, reliability and dedicated after sales support. Nine different brands of meter manifold with dual check and isolating valve have been sold against the GM900S in New Zealand over the past 10 years. While these were originally from places like the UK, Australia and South Africa the latest remaining competitors come from China in either brass or plastic bodies. Due to lack of support and most not living up to the customers expectations established through their use of the Acuflo bronze GM900S these numerous competitors manifolds have left the market. Some have resulted in Councils implementing an active removal process with the others being removed only once a problem develops.

It looks like the GM900S may have met its match!

For the first 6 months of 2011 following general release, the Acuflo CM2000 composite manifold has seen strong Council approval and take up across the Country. One in every five Acuflo manifold sold in 2011 has been a CM2000 composite manifold.

With every CM2000 being designed, injection moulded, assembled and individually tested in New Zealand by Acuflo, catering for the increasing demand can be met without delay. Buying New Zealand Kiwi made product also reduces imports, provides local employment and reduces your carbon foot print with an estimate 40% less energy being expended through the installation of the Composite CM2000, over brass manifolds shipped halfway around the world.

This suggests a win win if the GM900S has met its match.

With the price of the CM2000 set at \$74.00 some \$29.00 less than the brass GM900S the environment will not be the only saving worth making.

The compelling advantages for change to the CM2000 will see it out selling the GM900S in the near future. Acuflo have no plans to remove the GM900S and as always, wish our customers to have a choice of product.
