

ACUFLO®

TOBY VALVE BOX & LID

Toby Box - **ATC160CUV**

Lid 160mm diameter

Standard 150mm storm water PVC pipe can be fitted inside the Toby cover. Pipe can be cut to length to suit valve depth.

Toby Base - **ATB160** (Optional)

Inter-connecting storm water pipe fits over the base and is located in position with a slotted housing on the outside of the base.

. DEFLECTION TESTED . RESISTENCE TESTED . LOAD TESTED .

The superior strength of polypropylene allows up to 50% more weight loading of polyethylene for the same deflection and has an immediate recovery rate. This means polypropylene can be used in areas traditionally suited to metallic product without the expense and theft problems associated with such materials as aluminum.

- Large diameter cover for ease of access to valve
- The base provides a firm seating for the cover and inter-connecting pipe without impinging on the service pipe of the valve
- Lids available in blue (other colours by arrangement)
- Use of the base avoids build up of spoil and worm casts covering the valve
