## COMPOSITE MANIFOLD ASSEMBLIES

CM2000 ASSEMBLIES

ACUFLO®

### VALVE . FILTER . METER . BACKFLOW . FLOW CONTROL

Our factory designs and preassembles manifold combinations to suit customer's unique requirements under its ISO9001 QA Certification. These manifolds can include backflow preventers, water meters, filters, flow control and other functional devices all designed to fit within the ACUFLO inground box with the option to have the assemblies pre-mounted on an ACUFLO box base. Each unit is preassembled and our pressure testing eliminates leaks, providing consistency and compatibility for customers main connections. This reduces installation time and purchase cost as well as future maintenance through standardization of each main connection. We are happy to discuss your preferred arrangement and quote you competitive pricing for assembly and testing.

- Corrosion free
- Lead free
- Leakage free
- Long service life
- Compact and low height
- Proven diaphragm valve
- AS/NZS2845 testable double check
- Individually performance tested
- Meets or exceeds relevant standards
- Lower purchase and installation costs

# Examples of some popular assemblies

## CM2000TR

20mm Composite manifold with blanking cap, incorporating top entry line strainer, upstream diaphragm isolating valve. Fitted with AS/NZS2845 testable double check backflow preventer and downstream isolating valve (dual check removed)

## CM2000620MCTR

20mm Composite manifold with Sensus 620 composite or brass manifold meter, incorporating top entry line strainer, upstream diaphragm isolating valve. Fitted with AS/NZS2845 testable double check backflow preventer and downstream isolating valve (dual check removed)

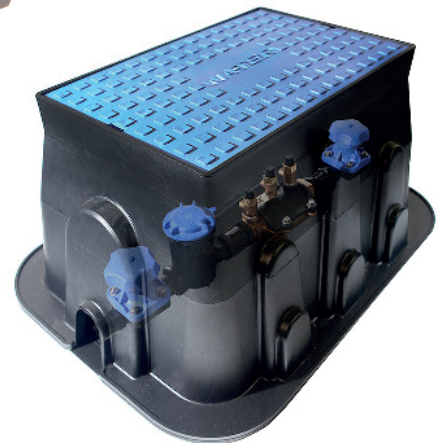

## CFC2000TR

20mm Composite manifold with large capacity fine stainless steel protection filter and stainless steel Maric flow controller, incorporating top entry line strainer upstream diaphragm isolating valve. Fitted with AS/NZS2845 testable double check backflow preventer and downstream isolating valve (dual check removed)

All of these custom built manifold assemblies can be supplied with an ACUFLO inground box and manifold mounting base.
