Re: ESTACION BIOMARINA DE OSTIONAL

TO WHOM IT MAY CONCERN

I would like to express my decisive support for the OSTIONAL BIOMARINE STATION as proposed by the children of Architect Edgar Cruz who was both my student and a close friend.

I also support the wonderful idea of the Cruz family through their Corporación Atmos firm to join forces with non-profit Marine Environmental Research Corporation (MERC) in order to create a sustainable alliance through their donation of land within the Lora Hills Project.

Such enterprise will certainly provide great opportunities in education, research and employment for local residents. This is precisely the type of activity that will contribute to improvements both of social as well as environmental issues that are of dire necessity in the area.

As a professional architect as well as an educator, I urge those who have any say in decision-making structures to give ample support to the above-mentioned proposal.

Sincerely,

Álvaro Rojas-Quirós

President Fournier-Rojas ARQUITECTOS, s.r.l.
