

Hola Fernando,

Please meet Wendy Cruz, who is from Costa Rica at the Ostional arribada site. She has a passion for the turtles and a larger vision of taking care of them and studying them. She has a place called Lora Hills, and is on a mission to set up a research station and engage the correct people. I immediately thought about you and all your work with Mexico and Cuba, so I wanted to introduce you two. I told Wendy and her team about you this morning in a conference call.

I have suggested that she send you info and links about their project and programs to see if they can engage/involve you.

I have also suggested that an advisory board of significant scientists and sea turtle leaders might help their cause. I have volunteered to be one of those.

Hope all is well with you and your work.

Regards and all the best,  
Wes
