

DataCycle Reporting Overview

Easy and affordable reports and dashboards

DataCycle Reporting is a report and dashboard automation solution. It provides automated, secure access to corporate or departmental data right from Excel.

Fully automated Business Intelligence

DataCycle Reporting combines the familiarity of Excel with the power of a true business intelligence solution. DataCycle Reporting providing secure access to corporate and departmental data sources, automating the tedious aspects of manual reporting, reducing errors in spreadsheet reports and delivering more visually useful gauges, charts and graphs.

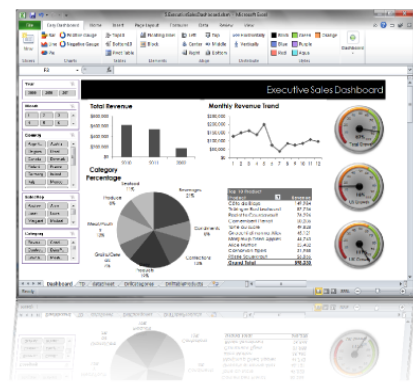

Easy Dashboards

With the Easy Dashboards feature of DataCycle Reporting, you can create visually-rich, insightful dashboards with just a few clicks of your mouse. You can be running our first reports in just a few hours.

Automated dashboards and reports in Excel

Powerful business intelligence reporting software combined with the familiarity and ease of Excel

- Dashboards
- Gauges, charts and graphs
- Automated delivery
- Email alerts
- Secure data access

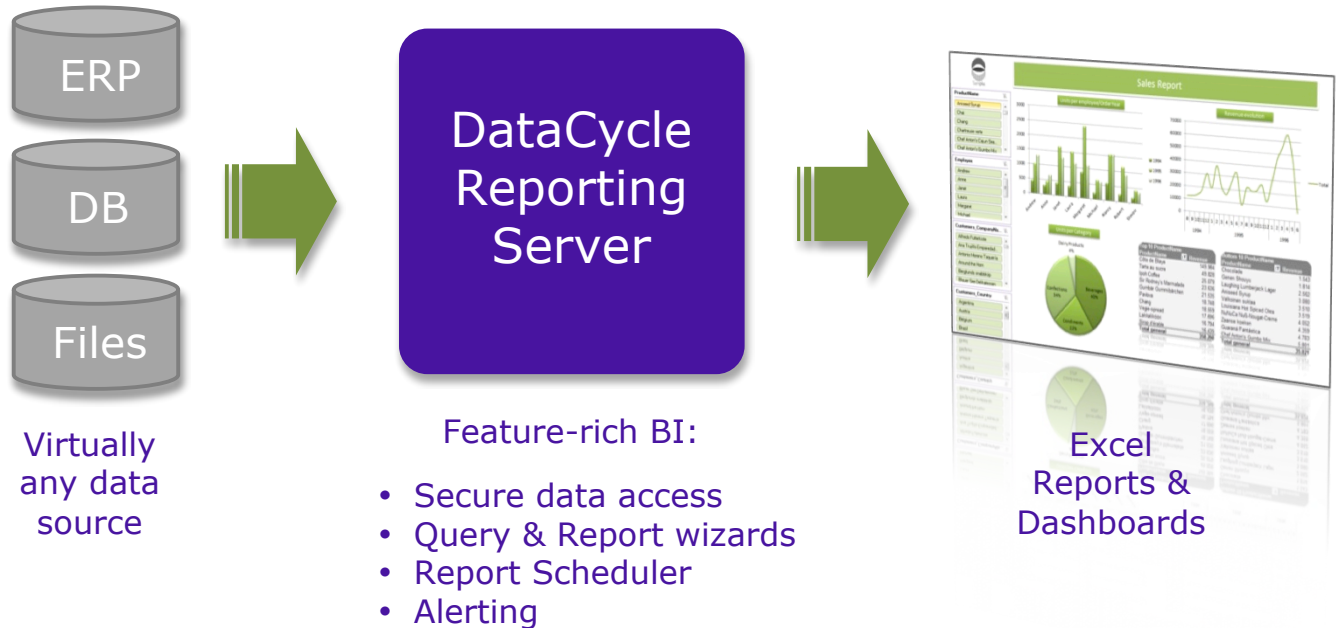

Advanced dashboards, charts and graphs. Dashboards provide at-a-glance summary views of critical corporate metrics. Dynamic charts, graphs and gauges allow users to explore data without requiring a new report.

Automated, secure access to any database or ERP system. Connect to data sources with the Visual Query Builder. Centralized data access ensures that sensitive data remains secure.

Simple visual tools for Report Developers. Once the queries are defined, building visual reports and dashboards is easy with the Report Wizard. You can build Easy Dashboards, Tabular Reports or Dynamic Pivot Table Reports in Excel.

Unlimited user licensing. Report recipients only need to have Excel – no plug-ins or add-ons.

DataCycle Reporting Architecture

Key Features

Connect to virtually any ERP system. SAP, JD Edwards, Oracle Financials, Microsoft Dynamics, Great Plains, etc.

Connect to any ODBC-compliant database. Oracle, Microsoft SQL Server, MySQL, IBM DB2. DataCycle Reporting also connects easily with flat file formats such as Excel and CSV.

Personalized report distribution. Reports can easily be scheduled. These reports can be personalized so users only receive the information they are supposed to see.

Threshold-based alerting. Alerting gives you hands-off monitoring of key metrics. When your thresholds have been met, DataCycle Reporting notifies you immediately by email or on your wireless device.

Multidimensional reporting. DataCycle Reporting makes multidimensional reporting easy by making Excel pivot tables easy to create and easy to navigate.
