Viewing details for Sales Order 0000116

Every distribution company ships products to customers. The **PAS Picking Control Center** puts you in control of what is getting shipped and when. This is an ideal solution for companies with a third party warehouse, or any company that wants to streamline the order fulfillment process.

The current MAS system is paper based. All picking sheets are printed, and then prioritized manually. The **PAS Picking Control Center** window will display all open sales orders, identify the highest priority orders, display what percentage of the order can be sent and display the available quantity for each item on an order, and present the percentage on others, show the order, promise and cancel dates, and the customer activity level, credit limit, and open balance. The list can be automatically prioritized or sorted by any field, and each order and/or group of orders can be selected for picking sheet printing. As each order is selected for shipping, the available quantities to the other orders are adjusted appropriately. When all of the shipping has been selected, a master pick sheet and individual packing lists can be automatically printed from this screen.

Features:

- Consolidated Master Pick Sheet
- Ability to create and email shipping instructions.
- No changes to MAS 90 source code, but uses 100% of the MAS 90 database for storing and writing data through the Business Objects Interface.

Price: \$2000 plus \$500 Annual Maintenance.
Product No. PASPCC007
