# Allowing FTP upload through ISA 2004
Version 1.00

By default ISA2004 blocks uploading (FTP write) to remote sites unless it is configured otherwise. This document will show you how to enable this ability.

1. Logon to the machine where ISA2004 is installed.

2. Run the ISA Management console via *Start | All Programs | ISA Server | ISA management*.

3. Expand the ISA2004 server node and locate the *Firewall Policy* element and select it.

4. On the Firewall Policy rules window to the right locate the *SBS Internet Access rule* and right mouse click. You should then see a menu like so:

5. Select the option *Configure FTP*.

6. Once selected you should now see a screen like so:

Configures FTP protocol policy

Protocol

Define FTP protocol policy for related rules.

☐ Read Only

When Read Only is selected, FTP uploads will be blocked.

[OK]   [Cancel]   [Apply]

7. If you uncheck the *Read Only* option then you will be able to upload via FTP.

8. Select *OK* to apply the change and then *Apply* again to update the rules in the Firewall.
