INTRODUCTION

Deep within us exists a longing to understand everything. Who or what created energy? Why does the universe exist? How do existences appear, endure, and disintegrate? What is life and how does it begin? Why does fire get old and end? What happens with death?

The profound question if God exists is persistently debated but the ultimate question "Who or what created God" is seldom examined.

First ancestors who wandered from million years habitats described things and phenomena with utterances. Combinations of selected noises, or words, produce sentences enabling thoughts, ideation, and imaginations. Grimaces, gestures, and speech abet communications between individuals. Languages formed with accumulating sounds over many generations.

Wanderers with inadvertently endowed language were suddenly conscious of selves and surroundings. Other significant simultaneous developments allowed processes and transformations of hominids to humans. We are aware with inherent thinking abilities. Humans understand because everything is conceptualized within vocabularies of sounds, or languages.

First humans imagined somebody created everything. An uncaused, self-existent, creating-everything creator was envisaged because conceptualized existences were inexplicable. We believe the existence of unseen divinities, as answers to everything existing, because of imaginations carried throughout human history.

Further origins and causation queries later produced religions. The authoritative controls of religious institutions are plausible because nobody and nothing else explains creation. Theologians assert a creator created everything but the first cause of the origin question is yet unsolved.

Cosmologists hypothesize the big bang theory because religions assert the existence of an uncaused creating everything creator. The narration explains the colossal universe randomly erupted from a dot somewhere, from nothing. Existences before the bang and triggers initiating the explosion are inexplicable.

Investigative science incorrectly describes galaxies, stars, bodies, atmospheres, oceans, matter, and life. Smoke and bubbles can never move upwards with gravity. Another hypothesized force, explained as angular momentum, is incompetent rotating planets and simultaneously propelling solar orbits. The continuous emanating power of refrigerator magnets, gravity, and angular momentum is unknown. Science continues proffering unconvincing hypotheses because ignorant childhoods accepted fairy tales actual.

Problematic relativity, uncertainty, and probability theories with esoteric mathematics mislead thinkers. Society's formidable ideologies religion and science fail explaining nature because theologians, philosophers, and scientists think within accumulating theoretical knowledge. Humans understand everything with inaccurate or incomplete illusory information. Uneasiness prevails because unconvincing answers increase queries.

Eleven reality revelations comprising *The Reality Bible: Revealing God and Everything* elucidates origins, endurance, and inevitable terminations of imagined existences. The extraordinary work rethinks everything with nine discovered natural laws.

The revolutionary book debunks concepts "creation," "causation," "beginnings," and "entities." Breakthrough disclosures refute many scientific thoughts. Provocative, prodigious and upsetting topics will shock fundamentalist societies, world-views, and religions. The revelations resolve never imagined, never-asked, and unanswered questions and have ignorance plaguing humanity over centuries.

Sensitive, incredible, and profound information will help people discover and realize. Altered thinking with realistic hopes will overcome uncertainties, ease anxieties, and relieve sufferings. Humans will live unimaginable ways with actual choices and decisions.

Let's turn pages, realize reality, and live lives accordingly.

Revelation 1

EVERYTHING KNOWN IS ILLUSORY MISLEADING SCIENCE

Nothing Is Known With Misconceived Thinking

“Science has explained nothing; the more we know, the more fantastic our world becomes and profounder the surrounding darkness.” Aldous

Huxley

A sudden awareness of surroundings and selves generated humanity. The first ancestors were amazed observing the graceful moon, twinkling stars, tall mountains, flowing rivers, scattered trees, and myriad creatures. The intense glowing solar orb orbited Earth and early ramblers at the center of everything must have imagined themselves special.

Humanity progressed from farmers into craftsmen and skilled workers. Along with tool making they worked hard with hands than think with heads. Basic enquiries remained insignificant with increasing chores. Further querying and progressive imaginations over generations produced myths, mysteries, religions, and philosophies.

First humans thought something or somebody created everything including selves. They were later dissatisfied with the thinking because of inability to see envisaged creators. Desperate information seekers began critically probing nature and existences were conceptualized and named to ease understanding.

Logical investigative approaches and gathered data construct hypotheses. Theory experimenting is the scientific method used with physicists and biologists throughout the world. Science originated and endures trying to describe actual and human ideated

worlds. Scientists identify, investigate, and continuously attempts to explain formations, endurance, and terminations of existences.

Flawed, confusing, and limited information failed Galileo, Kepler, Newton and researchers trying to discover nature beyond normal descriptive thoughts. Early scientists claimed mathematics will turn beliefs into facts. Newton stated objects fall with gravity. These wrongly interpreted assertions and others, commenced improper scientific thinking.

Incorrect suppositions from illusory imaginations impede science and produces misleading knowledge with abounding unresolved questions.

Nothing Is Known Without Answers

“The important thing in science is not so much to obtain new facts, but to discover new ways thinking them” Sir William Bragg

The big bang theory describes the universe’s origin and existence. The random and spontaneous erupting cosmos from nothing is incomprehensible because triggers initiating the explosion and propelling forces continuing the faster than before expansions remain undiscovered and unexplained.

Unknown assumed mechanisms increase space which move structures with the bang. Star fields and galaxies will experience revolving and localizing difficulties with more forming space and inferred propelling dark energy if the universe is steady.

Astronomy informs condensing gas masses form stars and other bodies. Unexplained expanding energy forms will never suddenly halt and clump into bodies. Stars form differently and planets never propagate heat, forces, and light. The formation of orbiting rings and moons disregards gas coalescing theories.

Interstellar mediums will never exist dark and frigid with surrounding bright and hot stars. Billions of large, medium, and small stars constitute galaxies but larger and smaller ones remain unobservable and unexplained. Following are few of the thousand unanswered queries:

Huge outer gaseous orbs dwarf the rocky inner planets within the solar system.

Earth and Venus have never turned completely solid as Mercury and Mars.

Distant Pluto is rocky and small in comparison to the nearer huge Jovian gaseous planets.

Mercury and Venus exist without moons. The inner planets endure without gas rings.

Atmospheres, moons, and rings have never amalgamated with the interiors of planets.

Planets rotate at various velocities on imaginary axes.

Planets orbit the Sun at different speeds, similar directions, and same planes.

The multi-layered oppositely rotating atmosphere endures with varying characteristics.

The atmosphere and solid Earth rotate different directions.

Weather differs between the equator and poles.

Ice regions, rainforests, and deserts exist at the same solar heat distances.

Cold and warm water mixing maintain same temperatures described as thermal equilibrium.

Light is white but fires and candles burn orange-red.

The moon is often seen larger than the bigger horizon Sun.

The horizon moon never produces sunset hues.

People eat, drink, work, sleep, and continue daily chores unconcerned what causes heat, light, electricity, magnetism, sounds, and planetary rotation. The Sun is envisaged with daylight. Gravity is imagined when objects fall. These satisfying answers stops further enquiries.

Expansions are incorrect without comparative data. We unknowingly accept unconvincing descriptions and carry on living with absurdities. Uncaring attitudes keeps ignorant.

Nothing Is Known With Theories

“A hypothesis and theory is clear, decisive and positive and is believed by no one but the man who created it. Experimental findings, on the other hand, are messy, inexact things, which are believed by everyone except the man who did the work” Harlow Shapley

Common investigations generated the scientific method. Scientific knowledge is based on observations, experiments, and testing hypotheses. Origins, endurance, and termination of existences exact addressing questions, but unavailable relevant data and incorrect procedures investigating physical laws can never discover what was, and is.

The big bang theory explains the universe appeared from nothing because religions assert a self-existent creating everything god. Many scientists and the majority of the populace believe the cosmos originated from a bang somewhere. The inexplicable power generating the explosion and expansion produces further hypotheses. Relativities, Dark Matter, Dark Energy, Membranes, Parallel and Multi Universes and other assumptions support the theory.

Science claims hypotheses facts and constructs reality from theories. Speculations describe the Sun's functioning and the existence of black holes but nothing can venture near the unapproachable

experiment will take 15 years or longer before data crunchers can analyze things.

Seven thousand physicists from different countries work around the collider. Conceptualized esoteric mathematics is used to study the hypothesized Higg's boson or god's particle, and other exotic theoretical particles from proton disintegrations, the apparatus.

Physicists have drawn plans for a 51 miles international Linear Collider. Theoretical electrons and positrons will collide at near-light speeds. Researchers hope experiments will offer more information to physicists as extra dimensions, gravity's origin, and how the big bang created the universe. The 8 billion collider's final design builds within 15 years.

During September 2011, neutrinos were propelled 450 miles within Earth from CERN, Geneva towards the Opera Laboratory at Gran Sasso, Italy. These particles were later discovered travelling faster than the speed of light. Cosmology and subatomic matter understanding will exact rethinking and complete revision if findings prove correct. The discovery breaks the most fundamental laws of physics including eccentric possibilities as Time Travel, Extra Dimensions, and Parallel Universes.

Billion dollars instrument and machinery continue to search theoretical reality or conceptualized existences. Million dollars hard water tanks, deep inside Earth, detect hypothesized elusive ghostly neutrinos. Expensive space probes record the prevalent microwave radiation hiss. Billion dollars exploration spacecraft try to confirm suppositions life exists elsewhere.

The biggest scientific experiment and the ILC will produce vistas exacting more equipment and labor funding. Research will

generate questions explained with inexplicable theories and hypotheses.

Investigative science is thinking. Thoughts envisage how reality functions and created theories produce incorrect questions wrongly explaining nature. The Higgs boson, dark energy, dark matter, exotic particles, and spatial dimensions are concepts. Physics is theories. Amazing discoveries are serendipitous.

Inexplicable Theories

“Just as houses are made with stones, so is science constructed with facts and a pile of stones is not a house and a collection of facts is not necessarily science”
Henri Poincare

Science hypothesizes reality and tries convincing us theories facts. Many people agree with gravity, magnetism, and angular momentum as irrefutable and unquestionable truths. Physicists and biologists explain the natural world using familiar theories as supporting evidence.

A large number of scientists agree with Einstein's Relativities, Pasteur's Germ Disease, Darwin's Natural Selection and others theories as confirmed facts. Even famous foundations and institutions reward theories with over million dollar prizes. Revelations within the book and others of a trilogy elucidate how rigorously accepted hypotheses mislead and impede science.

Particle physics hypotheses as Technicolor, Preon Models, and Super Symmetry remain untested with available technology. Twister Theory, Casual Sets, Super Gravity, Dynamic Triangulation, and Loop Quantum Gravity are space-time theories.

Every existence endures with integral space and further exists within atmospheric, interplanetary, interstellar, and galactic space.

Theories are incorrect and incomplete if invisible immeasurable space, as energy, is unconsidered.

Improper Scientific Explanations

“The deepest sin against the human mind is to believe things without evidence. Science is simply common sense at the best, rigidly accurate observation and mercilessly fallacious logic” Thomas Huxley

Astronomy books state galaxies exist with billions of star fields. Astronomers evaluate galaxy sizes from estimating distances. Galaxy star totality is surmised calculating sizes, average distances from each other, and average occupying volumes. Dense galaxy centers and spiral arms of conjoined stars produce incorrect estimations. Entirety decreases with underestimated calculated distances and increases with overestimation. Inaccurate measurements create and destroy energy or matter.

Technology cannot measure distant stars because telescopes and sophisticated electronic detectors can never evaluate diminishing, expanding and disappearing star light over distance. Galaxies can have more and less stars and exist further or closer than speculated.

Within 1910 the public were informed Earth will pass Halley comet's tail of poisonous gases. Rumors sparked mass hysteria around the world and gas masks sold out. Climatologists lack enough knowledge to explain the formation and endurance of the atmosphere and oceans. Environmentalists blame global warming on human activities as fossil fuels burning; smoke from factories; vehicle emissions, and tree cuttings. Investigators never consider the daily belching of immeasurable tons of carbon dioxide and other gases from hundred active volcanoes.

The Sun never sets nor rises. Clock hands move either clockwise or counter-clockwise depending on sides viewed. Earth moves clockwise if viewed from above or anti-clockwise from below.

Scientific communities are concerned with rising numbers of fraudulent incidents because ninety percent of material published within science research journals is wrong. Assertion dictate thinking. Improper scientific explanations play important roles with lives influencing politics, religions, and philosophies.

Inventions and assumed discoveries excite and elate minds over short durations. The information delves us with awe and others promote false expectations and hopes. Science keeps the populace wondering and excited with misconceived possibilities.

Pictured And Named Existences Never Explain

“The progress of science has itself shown there can be no pictorial representation of the workings of nature of a kind that would be intelligible to our limited minds” Sir James Jeans

Scientific journals, magazines, books, and newspapers are replete with pictures, drawings, photographs, and other electronic marvels.

Today’s instruments cannot photograph star binaries and capture entire galaxies. Revolutionary line encircles heated nuclei producing color. Outer space is colorless without molecules so computers design and simulate space images in color to excite the populace. Delineations and unreal colored photographs are false representations.

Mathematics And Theories Are Concepts

"Since mathematics has invaded the theory of relativity, I never understand it anymore" Albert Einstein

"Above other sciences, mathematics enjoys special esteem with certain indisputable and absolute propositions. How in mathematics, the human thought product, independent of experience and right with reality objects remains admirable" Albert Einstein

"I am aware of the marriage between mathematics and physics, which was fruitful during past centuries and has recently ended with divorce" Freeman John Dyson

"Mathematics possesses the false reputation of yielding infallible conclusions. Its infallibility is nothing but identity" Johann Wolfgang Von Goethe

"One never inquires into mathematic foundations and nature without delving into the operations question with which the mind mathematical activity is conducted. If it failed taking one into account, then the other is left studying the language within which mathematics is represented rather than the essence of mathematics" Leutze Brouwer

"Today's scientists substitute mathematics with experiments and then wander off with equation after equation, building structures with no reality relation" Nikola Tesla

"Mathematics was associated with refined error types. Mathematical knowledge appeared certain, exact and applicable to the actual world. It was obtained from mere thinking and without observation. Mathematics was thought to furnish ideals from which everyday empirical knowledge fell short. Thought is superior to sense and intuition with observation is mathematics based. If the sense world never fits mathematics, so much the worse for the world of sense" Bertrand Russell

Mathematics evolved with abstraction, logical reasoning, calculations, and the systematic studies of shapes and motion of physical

objects. Mathematics is created and developed to understand the natural world.

Mathematics has its ways of answering unknown, mysterious, and confounding questions. Mathematicians created non-variable laws because flux produce limitless variables. Past remains inexplicable and the future are unpredictable because mathematics is impotent facing infinity.

Contemporary physics endures with unfounded and uncertain classical mathematics. Physics is understood with modern ways of incredible assumptions and difficult mathematics. Many cosmologists explain the big bang universe's origins, expansion, and functioning thinking mathematical entities exist.

Physics research focuses on The Theory of Everything, or the secrets of the universe. Researchers hope the unification of the known natural laws reveals everything. Parallel Universes, Branes, Multiple dimensions, and Multiverses are fantastic conjectured models of reality explained with unreal mathematics with none based on observable or measurable evidence.

Manipulated mathematics opens different ways of imagining the nature of reality and generates word theories. Collection of mathematical equations produce different universes.

Mathematics abets explaining numbers conceptualized existences but is ineffective accounting actual world functioning. Simple line definition concepts change logic and produces different geometry and algebra. Spatial point's movement at each moment alters imagined mathematical measurements and falsifies experiments testing hypotheses.

Mathematical extrapolation assists technological advances but mathematics is both misleading and useful in resolving few simple

physics problems. Mathematical ideas and assumptions as infinity, magnitudes, points, numbers, forms, and order require detailing and defining before application with the natural world.

The Unsuccessful Quest Of Physics

“In the Middle Ages, people believed Earth was flat, just when they had at least evidence to their senses: we believe Earth to exist round not because many as one percent of us could give a physical reason for so quaint a belief, but because modern science has convinced us nothing obvious is true and everything magical, improbable, extraordinary, gigantic, microscopic, outrageous and heartless is scientific” George Bernard Shaw

Scientists continue theorizing the world from humanity beginnings. Scientific ideas handed from earlier generations offer science with reasonable carrying on functional models.

Within the eighteenth century people assumed science discovered things. Light was considered as waves and its varying intensities, producing different wavelengths, explain solar lights, lit bulbs, and burning candles. Magnetism and electromagnetism is understood with light wave theories explaining electricity interference and diffraction. Michael Faraday improved the understanding of electricity and magnetism with conceptualized forces. James Clerk Maxwell asserted light is an electromagnetic wave without explaining forces generating electricity and magnetism. John Dalton's atomic theory explains matter with the elusive circling electrons, as clouds, orbiting postulated atom nuclei.

After 1930 theorists found large number of galaxies. Around 1980 physicists formulated the physics standard model of elementary particles describing protons and neutrons comprised of quarks conjoined with gluons. On the macro scale, cosmologists discovered the cosmos constituted of neutron stars, quasars, supernovae, and

black holes. Other astrophysicists found evidence the universe has dark matter.

21st century physics introduced eccentric ideas as multiple dimensional super strings, quantum gravity, special relativity, warped space-time, gluons, probable electrons, mostly neutinos and other altering concepts. Few scientists can understand hypotheses with esoteric mathematics.

String theories claiming unification of particles and natural forces are incomprehensible with incorrect premises. Ten spatial dimensions structures and super-gravity and M-theory includes eleven. Nuclei, molecules, objects, planets, and stars form and endure within three dimension space.

Science now focuses on the distant macro and invisible micro worlds but simple Earth phenomena are never correctly or completely explained. Physicists define supposed particles too small measuring and others with ups, downs, colors, charms, and personalities. Inferred dark energy, dark matter, and the postulated unobservable unapproachable black holes are inexplicable hypotheses.

Science creates theories and conducts experiments to test the workings of nature. Billion dollar accelerators and collision machinery hunt out exotic particles and spacecraft explore the heavens. The above exercises make science exciting. Scientific research adds knowledge but most is detrimental than helpful.

Frustrated scientists with unsuccessful explanations propose relativity, uncertainty, probability, and invisibility theories. Physical reality is incomprehensible from science filled with mysteries, inconsistencies, anomalies, contradictions, probabilities, and uncertainties. Today's science is replete with fanciful abstractions.

Refuted theories generate questions and hypotheses and the accumulating information world grows larger with unsolved problems, increasing complexities, and confusions. Illusory knowledge accumulation generates thoughts and questions and incorrect or incomplete answers improve ignorance.

Science misleads us because we know nothing and know now anything.

WE CANNOT KNOW ANYTHING

The Origins of Humanity and Thoughts

“The more I read, the more I meditate and the more I acquire, the more I am enabled to affirm I know nothing” Voltaire

The Christian bible mentions Adam, Eve, Cain, and Able as the first family but the acquisition of human languages is unknown.

Creatures eat to live. They move from niches if altering environments generate foraging difficulties and predation prevents and interferes with subsistence. Organisms evolve with conditions and other events elucidated within another revelation.

Biological cells constituted of nuclei and molecules form creatures. Sounds from colliding nuclei activate receptors within auditory systems and abet hearing. Different collisions producing distinct noises let creatures “understand” familiar sounds. Group members utter foraging and warning signals.

Over thousand years, wandering hominids related and described things and events with noises, or sounds, or words. Combinations of selected words produce sentences enabling thinking and imagining. Grimaces, gestures, and utterances from thoughts and imaginations abet communications between individuals.

The sudden inadvertently acquired language, with other significant developments, generated awareness of selves and surroundings

Distinct dog barks signify different requirements. Animals "know" with touches, pictures, and noises memories stored within forms. Human languages comprised of larger sound collection produce more thoughts facilitating greater ideation levels.

Motivated interesting chromium bound neuro produce thinking. Human think ideas, imagine, query, create, action and have using varying sounds or words combination within languages. Imaginations with thinking and ideation produce queries and curiosities which generate knowledge.

Illusory languages produce illusory worlds and lives. Humans live lives within conceptualized languages worlds but exist within a different actual universe. Nobody knows anything.

Everything Is Inexplicable Within Human Languages

We operate with nothing, with things which never exist, with lines, planes, bodies, atoms, divisible time and indivisible space. How will explanations be possible when we first make everything into an image, into our image? Friedrich Nietzsche

Humans became scientists at the moment of realization. Humans imagine, conceptualize, query, and create. Conceptualized existences within illusory languages enact explanations and accumulating information originated religions, philosophy, and science. From the 11th century religions, mystical beliefs, and philosophical speculations play significant roles motivating scientists and inspiring scientific inquiry.

From humanity beginnings, the formidable ideologies of society, religions and science, fail to explain "why" questions. Science investigates processes functioning things and tries explaining the "how" queries. Misleading descriptions endure science. Theological

doctrines asserting the creating everything creator prevents further querying.

Imaginations produce queries and conceptualized existences. Descriptions of creations exact thinking and imagining which take thoughts back to the beginnings. Inaccurate and incomplete answers exact further meanings and descriptions which explain aounding unresolved queries. Further querying within illusory language generates increasing problems, complexities, and confusions.

Sound vocabularies or self-generated illusory languages can never explain conceptualized existences. Accumulating theoretical knowledge produces unresolved queries. Conjectures, speculations, suppositions, assumptions, theories, and hypotheses improve ignorance of reality.

Energy transmutations generate sounds and create illusory minds. Energy everything everywhere is nothing. We cannot know anything.

Sample
