

With a ton of trailer behind you, you really need to be in control

The Redarc range of electric trailer brake controllers put you in charge... not your trailer.

Designed for use with trailers, horse floats, camper-trailers, boat trailers and caravans with electric brakes, you can adjust the amount of braking with the turn of a knob.

Your trailer behaves exactly as you expect it to whenever you apply the vehicle brakes.

What's more, you can apply the trailer brakes independently of the towing vehicle's brakes, giving you absolute control over your trailer (no more uncontrollable sway!).

- An electric trailer brake controller to suit most applications
- Compact size
- Easy to install
- Manual over-ride capability in EB and EBRH

EB range wiring - 12V electrical system vehicle

Newsletter

Whilst displaying EB electric trailer brake controllers, both installations shown also apply to EBRH and EBTM controllers

EB range wiring with EB24A - 24V electrical system vehicle

Also available - the Redarc Breaksafe range

Where the gross towed mass (GTM) exceeds 2 tonnes the electric braking system must be fitted with a breakaway system that causes the brakes to be applied if the trailer becomes disconnected from the towing vehicle.

- Breaksafe 5000 - to suit 2 and 4 wheel electric brakes
- Breaksafe 5000XP - to suit 6 wheel electric brakes
- Breaksafe 5000RM - remote monitor to suit both kits

The new EBRH electric trailer brake controller with remote head

NEW

The EBRH electric trailer brake controller has all the features of other EB models and more.

The dual-purpose remote mountable switch fits neatly into an easily accessible position and:

- allows the driver to vary the braking power to the trailer brakes when the vehicle brakes are applied
- has a push button which, when depressed, manually applies the trailer brakes independently of the towing vehicle brakes.

The LED has two functions:

- it illuminates green indicating the vehicle is towing a trailer which has electric brakes
- it illuminates red when the vehicle brakes are applied... the stronger the braking, the more red it becomes.
