Vlamis Software Solutions is one of the most respected training organizations in the Oracle Business Intelligence community because our training programs and materials are informed by our experience leading implementations in many of the world’s foremost corporations. Through our roles as implementers, beta testers, and trainers, we develop and codify many of the “best practices” that are propagated throughout the industry. Our training materials reflect this expertise and are centered on hands-on exercises that build confidence and competence. With more than 200 Oracle BI implementations under our banner, our trainers are not just presenters, but accomplished consultants who incorporate their real world experience into the classroom ensuring that participants are optimally prepared. This Hands-on Lab is an excerpt from our OBIEE 11g classroom / web-based class.

Oracle BIEE 11g Report and Dashboard Hands On

The Oracle BI Answers and Dashboards are the reporting components of the Oracle Business Intelligence environment.

This hands-on will consist of two 1 hour sessions covering the following:

**Part One**
Overview of What’s New
The New Analysis Look and Feel
Answers – New Features
   Lesson #1 Working with New Column Types
Graphs New Features
   Lesson #2 Working with New Graphs

**Part Two**
Using Maps – A whole new world!
   Lesson #3 – Using Maps
Prompts – New Features
   Lesson #4 Working with Prompts
Dashboards Putting it All Together
   Lesson #5 Building Dashboards

---

Why Vlamis?

- Founded 1992
- Focused on Oracle technology since 1995
- Experienced consultants with over 200 BI implementations
- Award winning authors and educators
- Aggressive adopters of the latest technologies
- Connected with Oracle product management and developers
- Efficient implementers by working offsite to reduce costs
- Team-oriented collaborative approach
- Respected reputation for ethical business practices

Training
- Training available for on-site, web, and CBT
- OBIEE 10g to OBIEE 11g Upgrading and New Features
- OBIEE 11g/10g - Ad-hoc Query and BI Answers
- OBIEE 11g/10g - BI Dashboards and Delivers
- OBIEE 11g/10g - Administration and Metadata Development
- BI Publisher for OBIEE 11g/10g
- Oracle OLAP

Supporting Database Schemas (Created by RCU)

Answers 11g Overview

- Improved support for OLAP-style reporting
  - Hierarchical columns
  - Support for ragged and skip-level hierarchies
  - Dynamic re-arrangement of pivot tables in the dashboard
- Dynamic grouping and custom aggregates
- New Prompts
- New dashboard controls
- New gauge types and graphics
Lesson 1 – Using the New Hierarchical Columns

Exercise 1a: Creating a query

In this lesson, you will:

1. Create a simple query in Answers
2. Apply filters to the query
3. Format the query

Enter the URL sent in your registration confirmation and enter the credentials sent to you (default User Id student1, Password welcome1). The password is case-sensitive.
Scenario

Build an Analysis that will show Revenue by Office by Time. The Offices Total value should be the aggregate of all Companies but only display the Companies that have Revenue between $6,000,000 and $9,000,000 for year 2010.

Create a Query

Click New and then Analysis at the top-right of the screen to navigate to the Answers start page.

Click on the A - Sample Sales subject area link.
1. In the left-hand selection pane of the Answers interface, click the Plus icon next to **Time Dimension** to drill down and see the columns associated with the **Time** dimension. Double-click the **Time Hierarchy** column to add it to your query criteria, which appears in the right pane.

2. Click the Plus icon next to **Offices Dimension** to drill down and see the columns for the Offices dimension. Double-click the **Offices Hierarchy** column to add it to your query criteria.

3. Finally, drill on **Facts**, then drill on **Base Facts** and add the **Revenue** column. Click on the **Results Tab** at the top-left of your screen.

4. Your results should look like this:
Filtering Data

Exercise 1b: Using Selection Steps

In addition to traditional Filters, OBIEE11g now has Selection Steps. We will use Selection Steps to choose the correct Offices to display. Show your Selection Steps by clicking the icon on the bottom-center of your screen next to Selection Steps.
Under **Offices - Offices Hierarchy** click **Then New Step** and click **Apply a Condition**. Drop-down the list of conditions. Select **X between ‘min’ and ‘max’ values**.

Set the **Action** drop-downs to **Keep Only** and **Company**
Click the [ ] under **Measure** next to **For**.

Click the drop down under **Members**, expand **Total Time** then select **2010**. Click off of the drop-down to make it collapse.
Enter 6000000 in the Value(1) box and 9000000 in the Value(2) box. If your New Condition Step looks like this, click OK.
The results should now look like this. Take note of the Selection Step you added.

Exercise 1c: Pivot Table and Hierarchies

Now let's work with the Pivot Table. You can drag and drop columns on Pivot Tables. If you highlight the Time Hierarchy column you will see a Grey Tab Show up (and the mouse pointer will change):

Now Grab the Tab and Drag it on top of the Revenue Column (you may see several different insertion points as you drag the tool bar.)
The display will now show this:

Click the arrow next to Total Time to Expand the Time Dimension and your Display should look like this:
You can expand the Offices and you will see that they stay within the same column. Expanding The Time will add columns but they are linked to the parentage and can expand and contract.

Save the Query as Lesson 1_<your initials> so we can use it in the next lesson.

Exercise 1d: Grouping

Next we will use the new Group Function to create an Aggregate Group

Return to the Results tab. If your Selection Steps is shown, minimize it by clicking the down arrow next to Selection Steps to free up screen space.

At the top of the area in the menu bar click on New Group

This allows you to create a separate aggregate group from selected members within a hierarchy.

Give the Group a name (My Office) in the Display Label text area. Select “Offices.Offices Heirarchy” in the Values From text area.

Go to Genmind → Production Org → Assembled Dept and select; select Subcontracted Org; and then, go to Tescare Ltd. → Subsidiaries Org. and select.
Click OK

Expand My Office and your screen should look like this:

![Image of a software interface showing a hierarchy of offices and a table with data]
Exercise 1e: Calculated Members

Next we will use the new Calculated Item Function to create a Custom Aggregate

- Return to the Results tab.
- At the top of the area in the menu bar click on New Calculated Item

You use this to create a separate aggregate from selected members within a hierarchy.

- Give the Item a name (My Office Total).
- Select Genmind → Production Org → Assembled Dept and move it over to the Selected field.
- Click the + button at the bottom.
- Select Genmind → Subcontracted Org and move it over to the Selected field.
- Click the + button at the bottom
- Select Tescare → Subsidiaries

Notice that the Select looks different. It is showing the calculations instead of just the members selected.

Click OK
The Results should look like this:

<table>
<thead>
<tr>
<th>Offices Hierarchy</th>
<th>1-Revenue</th>
<th>1-Revenue</th>
<th>1-Revenue</th>
<th>1-Revenue</th>
</tr>
</thead>
<tbody>
<tr>
<td>Genmind Corp</td>
<td>18,281,788</td>
<td>6,127,847</td>
<td>5,953,688</td>
<td>6,200,252</td>
</tr>
<tr>
<td>Tescare Ltd.</td>
<td>24,647,727</td>
<td>8,280,520</td>
<td>8,092,246</td>
<td>8,274,962</td>
</tr>
<tr>
<td>My Office</td>
<td>24,665,670</td>
<td>8,248,705</td>
<td>8,104,323</td>
<td>8,310,642</td>
</tr>
<tr>
<td>Assembled Dept.</td>
<td>3,492,153</td>
<td>1,146,864</td>
<td>1,149,852</td>
<td>1,195,438</td>
</tr>
<tr>
<td>Subcontracted Org.</td>
<td>7,221,932</td>
<td>2,425,032</td>
<td>2,356,748</td>
<td>2,440,152</td>
</tr>
<tr>
<td>Subsidiaries Org.</td>
<td>13,946,584</td>
<td>4,676,810</td>
<td>4,597,723</td>
<td>4,675,052</td>
</tr>
<tr>
<td><strong>My Office Total</strong></td>
<td>24,665,670</td>
<td>8,248,705</td>
<td>8,104,323</td>
<td>8,310,642</td>
</tr>
</tbody>
</table>

Notice that the Calculated Item (My Office Total) is not Drillable but the Group (My Office) is Drillable. The Totals for both rows are the same.

**OBIEE 11g Charts and Graphs**

- Additional Graph Features implemented
- Sliders, Zoom and Legends
- Master Detail links
Lesson 2 – Creating Graphs

Exercise 2a: Graph Slider

Go to Selection Steps and Delete the My Office Group and My Office Total Calc
Working with the same query, select New View → Graph → Bar → Vertical.

You should get something like the following:
Click on the pencil icon to edit the Graph View and perform the following:

1. Move Time Hierarchy under Sections
2. Check “Display as Slider” in the Sections
3. Expand Total Time in the graph view
Click **Done** and your graph will look like this:

Click the Play button on the slider or move the slider to display results for various years.

Save this as Lesson 2A_<your initials>
Exercise 2b: Graph Zooming

Create a new Analysis (using New → Analysis → A - Sample Sales) using the columns shows below:

Double click the following column names Time → More Time Objects → T02 Per Name Month, Offices → D4 Company, Facts → Base Facts → 1-Revenue to add them to the Criteria tab.

Go to the Results tab.

Create a new View → Graph Stacked Vertical Bar
Now click the pencil icon to Edit the Graph.

Click the Edit Graph Properties icon and set the following:

1. Zoom Enabled for Horizontal and Vertical Axis
2. Legend on the Top
3. Canvas Width to 600
Click OK and your Graph should look like this:

When you move your mouse to the bottom left side of the graph (you may have to minimize the Layout section on small screens), a small magnifying glass icon will appear. Click on the Zoom icon and zoom into the Horizontal Axis so you can see each month label.
Lesson 3 – Maps

Exercise 3a: Creating a Map View

To create a Map view we must first start with data that has some geocoded columns. The Sample data has several columns that can be used.

Create a query by selecting New Analysis in the A Sample Sales subject area with the following columns:

Customers → Cust Regions → Cust Geo Codes → C61 Geo Country Code, C62 Geo Ctry State Name, then Time → T05 Per Name Year, Offices → D4 Company, and Facts → Base Facts → 1-Revenue.

Add a Filter for Country Code where the Value is USA.
Now delete the C61 Geo Country Code from the selected columns.
Click Results Tab

<table>
<thead>
<tr>
<th>C62 Geo Ctry State Name</th>
<th>T05 Per Name Year</th>
<th>D4 Company</th>
<th>1- Revenue</th>
</tr>
</thead>
<tbody>
<tr>
<td>USA_Alabama</td>
<td>2010</td>
<td>Germind Corp</td>
<td>28,489</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Stockplus Inc.</td>
<td>42,141</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Tescare Ltd.</td>
<td>33,991</td>
</tr>
<tr>
<td></td>
<td>2011</td>
<td>Germind Corp</td>
<td>24,217</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Stockplus Inc.</td>
<td>46,208</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Tescare Ltd.</td>
<td>43,480</td>
</tr>
<tr>
<td></td>
<td>2012</td>
<td>Germind Corp</td>
<td>21,404</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Stockplus Inc.</td>
<td>24,576</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Tescare Ltd.</td>
<td>30,313</td>
</tr>
<tr>
<td>USA_Alaska</td>
<td>2010</td>
<td>Germind Corp</td>
<td>26,467</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Stockplus Inc.</td>
<td>18,768</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Tescare Ltd.</td>
<td>14,686</td>
</tr>
<tr>
<td></td>
<td>2011</td>
<td>Germind Corp</td>
<td>30,364</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Stockplus Inc.</td>
<td>18,414</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Tescare Ltd.</td>
<td>19,294</td>
</tr>
<tr>
<td></td>
<td>2012</td>
<td>Germind Corp</td>
<td>46,256</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Stockplus Inc.</td>
<td>32,256</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Tescare Ltd.</td>
<td>22,132</td>
</tr>
<tr>
<td>USA_Arkansas</td>
<td>2010</td>
<td>Germind Corp</td>
<td>6,872</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Stockplus Inc.</td>
<td>20,134</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Tescare Ltd.</td>
<td>13,365</td>
</tr>
</tbody>
</table>

Edit the Table Layout (click Pencil in corner above) and make the following changes:
Drag T05 Per Name Year to the Table Prompts Field.
Drag C62 Geo Ctry State Name to the Excluded Field.
Click Done.
Now Create a New View → MAP you should now see this:
You can zoom in using the zoom bar on the left.

Click on the Edit (pencil icon) to edit the Map view.

Inside the Map view, hover over the Revenue (Color Fill) later, and Click on the Edit (pencil icon) next to 1-Revenue (Color Fill).

Make the changes show to the Revenue Selection.
Click OK and your color Coding should be shown.
Now Add a new View with the Settings shown: **Note: this is accessible when in Map Edit mode.**

Now you will see Bar Charts on each of the States that have data. This represents the Revenue for Each Office within the State.

Last thing is to set the **Map Properties** (change Canvas size to Custom) to resize the Map

Change Canvas Size to Custom → 800 by 600

Hit OK and then you might want to zoom your map to better fill the page

Now let’s remove Alaska! Go to the Selection Steps and under C62 Geo State Name enter this Selection step to Remove USA_Alaska. You may want to use the search interface to find USA_Alaska quickly.
Lesson 4 – Prompts

Exercise 4a: Creating a Prompt

Prompts can be created for a particular Query or can be created as a standalone prompt for a Dashboard. First we will create a prompt tied to a query.

Go back into the Home page or Catalog and Edit the Lesson 1_<your initials> Query
Open the Selection Steps pane. Under Time, Time Hierarchy click 2. Then New Step. Click Select Members Based on Hierarchy, Modify the Selection Steps to only keep members of the YEAR level.

Now Click on the Prompts Tab.

Click on the big Green + sign to start add a Column Prompt. Select More Columns
Expand the Time dimension and select T05 Per Name Year

Click OK and the Prompt diagram will appear. Change the Label to “Year” and Click OK again.

Now add another prompt for Offices, D4 Company. With the User Input set to List Box.
Click OK

When done your screen should look like this:

Notice at the bottom of the screen you will see what the prompt will look like.
To test this click on the Preview Icon to preview the results. Use the Drop Down to select 2010 and 2011. Notice the ability to support multi-select in a combo box. Then Select Genmind Corp in the company selector and click on OK. Your screen should now show this report.

Exercise 4b: Creating a Dashboard Prompt

Now let’s create a dashboard prompt.

The steps involved in creating a Dashboard are the same as the query prompt it is just the starting place is different. For a Dashboard Prompt you first click on the New Link in the top menu and select Dashboard Prompt.

Choose A – Sample Sales Subject area

Now you will see a blank Prompt Page. Just like before you click the Green Plus (+) and choose Column Prompt.
We are going to add the column Product Type to our report and wish to add a prompt for this column.

Expand Products and choose P2 Product Type.
Click OK and set the User Input to List Box just like last time.

Save the Prompt by Clicking on the Save Icon. Save as Lesson 4B Prompt_<your initials>.

That is all there is to creating a dashboard prompt.

**Lesson 5 The Dashboard: Putting It All Together**

Oracle BI EE dashboards allow you to combine many different types and sources of data in the same place, giving users snapshot views of whatever is important for running their business. The BI Answers queries that you built in this class are just one type of content that Oracle BI EE Dashboards can utilize. This screenshot shows an example of the many different content options available to you with Oracle BI EE Dashboards.

**Sample Dashboard**

![Sample Dashboard Image](image)

**Exercise 5a: Creating a Dashboard**

Now let’s create a dashboard to store all the analyses we just built (plus one more).

We can either create a new dashboard or edit the default Dashboard. For this exercise we will create a new Dashboard.

First, we'd like to modify our report from Lesson 1 to include the new column Product Type so we can use our prompt we just created.
From your catalog, edit Lesson1_<your initials> by clicking on the Catalog link up top and selecting the edit choice for the Lesson1_<your initials> analysis.

The analysis will open. Then click and drag the Products > P2 Product Type column into the report as another row column.
Now go to the Criteria tab and add a filter on the Product Type column.

Set the filter for the column to "Is Prompted" and click OK.

Save this analysis as Lesson 5A_<your initials>.

Now that we have this new report by product type, we can add that report to our new dashboard.

Select New > Dashboard, name it Lesson 5_<your initials>, and drop down the location list box and select Browse Catalog… so we can save this in a folder.
Select the New Folder button and give the folder the name of <your initials>.

The system will warn you that the dashboard will not appear in the Dashboards drop-down list. That's fine.

You will now see the blank Dashboard Screen.
The next thing to do is to create a Column. On the left grab Column and drag it to the Workspace and release the mouse.

Do the same thing for Section, imbedded within the Column. (Top Arrow in Picture Above)

Drag and Drop Lesson4BPrompt_<your initials> into the Section (2nd Arrow)

We want to add the Lesson5A_<your initials> to the same section. To do this you must first set the section so that presentations are organized horizontally.
Click the Horizontal Layout icon that appears when you hover over Section 1.

Now click on Lesson 5A_<your initials> and drag it to the Right of the Lesson 4BPrompt_<your initials>.

Now save the dashboard and click on Run

Now you can test how the prompt works
Now let's add a new page for our graphs.

In the right hand corner of your dashboard there is an option button, select Edit Dashboard.

To Add a new Page you go to the menu at the top and click on the Green Plus icon.

You will be asked for a Name – call it Graphs. And you will now see a new blank dashboard.
Now we want to add a new Column and one section as we did before. Now drag Lesson 2A and then Lesson 2B. Your Screen should look like this:

![Dashboard screenshot](image)

Save and Run and you can see the two tabs.
End of Exercise
