

**PELLET STOVES** Harman pellet stoves offer more heat output, steady temperature control, and a level of convenience you won't find with any other pellet stove on the market. Harman's accordion heat exchanger design allows for a large surface area to be located in a smaller firebox, which means maximum heat transfer to your home. Total convenience includes the easy-to-clean design and extra large ashpans, which are large enough to accommodate almost a ton of pellets worth of ash.

**CORN STOVES** Harman's PC 45 Pellet/Corn Stove is a state-of-the-art stove with a corn-specific twist on Harman's patented pellet feeder design. The PC 45 is capable of burning up to two weeks, depending on fuel quality, without any maintenance. The PC 45 is the only corn burning stove with automatic ignition and constant temperature control in the stove industry.
