

*"Empty beds mean lost revenue.
With Responder® NET, streamlining
the bed turnover process not only
prevents lost revenue, but makes
my staff more efficient."*

The NET Effect

Faster Bed Turnover

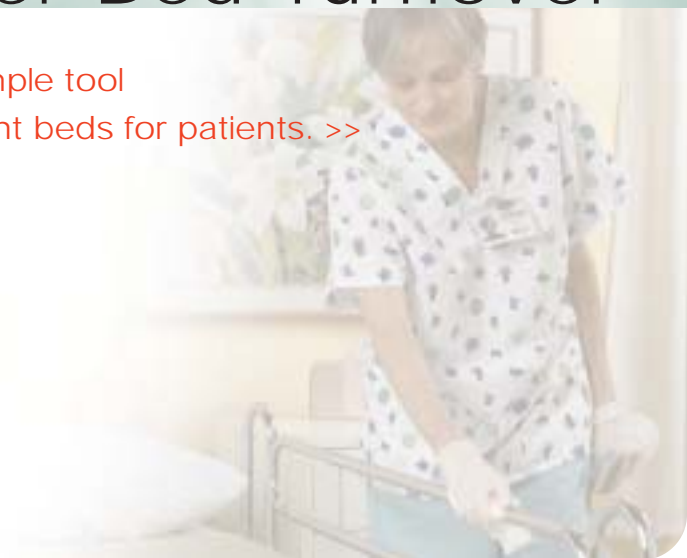

<< Responder® NET provides caregivers with a simple tool that eliminates the hassle of finding vacant beds for patients. >>

Save Time and Steps

Checking to see whether a room is ready for a patient generally means wasted steps and wasted time. And more often than not, patient waiting time results in missed room revenues. With Responder® NET, housekeeping can be notified instantly when beds are in need of service, while staff can quickly see all available beds.

Convenience and Satisfaction for All

Staff will appreciate the instant notification that Responder NET delivers. Patients will appreciate the comfort of moving into a room without unnecessary delays and hospital management will appreciate the positive impact on bed turnover rates.
