

Responder® IV to Responder® 5 Integration

Maximum Leverage for Your Nurse Call Investment

Your hospital can benefit from many of Responder 5's advanced features while continuing to use your existing Responder IV system.

The Responder 5 system is simple, easy-to-use and full of advanced workflow features and capabilities. This comprehensive communication system incorporates the latest technology—wireless phones and pagers, real-time locating systems, electronic staff assignments and enterprise-wide reporting—with traditional “nurse call” equipment.

What's more, thanks to Rauland's Responder platform interoperability, you can integrate the new Responder 5 system with your current Responder IV system to achieve the maximum return on your investment. Whether you're building a new tower or unit, or replacing your current system, the ability to combine systems yields significant advantages.

The Benefits of Integration

Rauland's Network Adapter Module enables certain features from the two systems to work together, allowing you to:

- Enjoy instant voice connections between staff and patients via a single Session Initiated Protocol (SIP) wireless phone integration that works with both Responder IV and Responder 5
- Use the same software interface across the hospital—on both Responder IV and Responder 5 units—so staff members only have to be trained on one system
- Deploy a centralized code blue, with display and answer capability from one Responder 5 console for both Responder IV and Responder 5 units
- Run a single set of nurse call reports to track response times and boost your process improvement efforts.

Save both time and money and enjoy new capabilities by uniting Responder 5 with your existing Responder IV system.

Features That Make A Difference

Thanks to Responder's interoperable platform, you can:

- Display calls, answer calls and set services from Responder IV stations via Responder 5 nurse consoles
- Display calls and service requests from Responder IV stations on Responder 5 PC consoles
- Assign staff members to cover Responder IV beds from Responder 5 Staff Assignments
- Use a single, wireless telephony and/or pager interface for both Responder IV and Responder 5 when using the Responder 5 Applications Suite
- Use Responder 5 Reports Manager to run reports on Responder IV beds as well as Responder 5 beds.

Responder IV—Responder 5 Integration Highlights

- Take advantage of Responder 5's advanced features and capabilities
- Leverage investment in your current Responder IV system
- Save time with training on a single software interface
- Trust the integration designed by the industry leader in nurse call systems.
