June 2017 Volume 35, Issue 6

TWA Newsletter

Next Meeting: Tuesday, June 20, 7:00 pm Location: SearStone Winston Clubhouse, 17001 SearStone Drive, Cary, NC

Topic: TWA Toys for Tots Program Kick-off Dinner

Treat your spouse to dinner, camaraderie and entertainment at our "free" annual Toys for Tots kick-off meeting at SearStone retirement community. This will be the kickoff of the 32nd year of the TWA Toys for Tots program. YOU MUST SIGN UP TO ATTEND. We MUST know the number attending to allow for dinner preparation and seating. If you have not yet signed up, please email or call Fred Ford at fredford22@gmail.com or (919) 469-9575 and reserve your seat.

The program will feature a show-and-tell of various items that members have made and have agreed to share with us. The presenters are: Hal Brown (military flag box), Bob Gabor (doll rocking chair and sliding dovetail box), Bernie Bogdon (carvings in progress), Bob Guenther (small bird) and Hugh Fish (segmented bowl).

Menu

Caesar Salad Roasted Chicken served with a Chef's Choice sauce Roasted Herbed Potatoes Fresh Broccoli, Carrots & Cauliflower Rolls & Butter Sheet Carrot Cake (2 layer), Decorated for Toys for Tots Ice Tea, Water & Coffee Agenda Room Ready at 6:00 PM Members arrive 6:30 PM Meeting Starts 7:00 PM Dinner 7:10 PM Show-and-Tell 8:10 PM Adjourn 9:00 PM

Please join us for a fun time!

Meeting location: SearStone Winston Clubhouse, 17001 SearStone Drive, Cary, NC 27513

Note: If using a GPS to find SearStone, please use 106 Walker Stone Drive for the address. SearStone is located at the SE corner of High House Road and Davis Drive, Cary.

Hosts: Alex Knittel and Fred Ford

the weather from treatments for

(meeting minutes: Janet Batker)

The meeting was opened by our president George Mills.

For show and tell, Bob Allen brought in a live edge cherry table top with a river of sapele running through the center for a grandson who cannot have it until he is 18! This will become a coffee table. The large attractive knot-hole brought on a lot of jokes about a cup holder!

Jerry Rhodes was recognized for volunteering to open up the (portable) library again, he will be coming to our meetings early to make sure this is done each month. We may be selling the collection of

VCR tapes as they are becoming

TWA GENERAL MEMBERSHIP MEETING—MAY 16, 2017 JAPANESE WOODWORKING TOOLS — JAY SPEETJENS

(meeting minutes: Janet Batker)

Bob Gabor introduced our speaker Jay Speetjens who demonstrated Japanese carpentry tools. Jay works as a fine homebuilder/furniture maker in Greensboro. He was introduced to Japanese hand tools indirectly because of his interest in martial arts.

The plane is the foundational tool in terms of Japanese technology, the steel being critical. Japanese used spear planes (edge tools) before the introduction of hand tools. They are fantastic creations and look as their name implies. The blades are made of high carbon steel, which is strong, but be careful with them. The planes mainly have a chip breaker and sub blade; if you can get a full width shaving the full length of the board, this means that the plane bottom is flat and that the tool is sharp. Japanese tools are not hollow ground, go for a flat bevel with very little camber.

Jay began to speak more specifically about planes. He demonstrated a plane steel that had been forge melded. The angle on the planes is between 25-30 degrees. (It must be higher for harder wood). There is a learning curve for using the Japanese planes.

Jay using a Japanese saw (photo: Steve Steinbeck)

Jay adjusting a plane iron (photo: Steve Steinbeck)

Jay works on cabinetry and furniture with a bench similar to what a carpenter uses. He places the boards on 2 sawhorses and goes to work. You have to be fastidious about your planes and wood if you are trying to hand finish a board. The plane he used took off beautiful ribbons of wood.

When queried Jay said the planes are available from him-he is your contact for the Japanese equipment.

He also uses power tools for everything they are appropriate for.

Chisels in Japan are made by individual artisans. There are two main centers of production. The chisels are forged laminated steel. Jay showed us using a spear plane how the surfaces were smoothed before the advent of the hand planes. He works the length with one cut if possible or in sections if this is not possible. Axes were used first to shape the wood. Saws and planes are pulling.

Jay showed us how to sharpen the forged steel and noted that the soft steel is wrapped by the hard steel. He uses stones for the most part and sharpens often. Create a burr and then polish it and go to work. Jay starts with 1000 grit and moves up to 5000 and 10000 grit. Use a diamond plate to flatten the grinding stones. Stones can be natural as well as artificial. The Nagura stone is a nice accessory as it flattens natural stone and removes the buildup from it.

Japanese saw blade teeth face each other which puts the blade in tension not compression and allows the kerf to be thinner. A cross cut single edge blade with a back is a pretty aggressive blade but one that Jay likes. He must have had 15 saws wrapped carefully with him, one of which was quite large. Japanese saws come with single sided and double sided blades. A Ryoba saw has a double-sided blade with ripsaw and crosscut saw on one blade. The bigger the blade, the bigger the teeth. A dovetail saw is also desirable to own or make.

Jay sawed some crosscuts and rip cuts. He created a dovetail tenon with a ripsaw while he was on his knees and sawing up and down (a nice position to do this in!). To saw dovetails, use a rip blade. Eventually it was time to end the meeting before we all wanted to start sawing logs!

UPCOMING MEETINGS

TUESDAY, JULY 18, 7:00 PM

Designing and Building Fixtures and Jigs

Speaker: Michael Peele

While working with Terry Tenhouse on his Toys for Tots project he seemed to think that I have a somewhat interesting methodology or approach to woodworking and asked if I would do a program. I agreed to do one.

So I'll be discussing two jigs, describing how I make them and how I use them. One is for creating slip tenons and the other for making shaped parts using a router table and bandsaw. For the tenon jigs, I will discuss how I make the tenon stock and then construct a jig for routing mortises for a nice tight fit. For the shaped parts jig, I'll show how I go from a design, to a jig and a finished part.

I also have automated my dust collector system and will describe how I did this and how to make the automated blast gates. I'll also describe my controller and show how a very simple controller could be made.

TUESDAY, AUGUST 15, 7:00 PM

Working with some of the Non traditional Woods

Speakers: Paul Rolfe and Jay Cash

While Over the past several years many types of non traditional woods have become available in the consumer market. These woods provide the woodworker with new, interesting, and artistic options. The presenters will discuss the characteristics of these woods coupled with information on unique finishing techniques, providing more options for our woodworking projects. They will discuss how the use of these woods meshes with that of more familiar woods to provide woodworkers with interesting options. The range of uses varies from the use as a base material to decoration/ embellishment.
