

imagepac stampmaker

Congratulations on owning the imagepac Stampmaker. You can now make very high quality, incredibly detailed polymer stamps, stencils and emboss plates (stencil and emboss kits sold separately) simply, in 5 minutes or less from your own artwork. This kit includes everything you need to get started making stamps: a UV light box, magnetic clamp to compress your polymer, wash out brush & post exposure tray, negative film to print your own artwork, 4 x medium and 6 x small stamp polymer pacs, a pre printed negative, a CD ROM containing our unique artwork modifying program for PC*, full instructions, videos & advice and imagepac 'Cling' for adhering stamps to your acrylic block. *Mac users, please see separate instructions for creating artwork.

Stampmaker offers endless creative possibilities allowing you to personalize your projects across all crafts. From jewelry to scrap booking, card making to stationery, from woodworking to ceramics even home decor. Go create!

If you have any questions about Stampmaker, or require any help with using the kit please contact us on :

When using stampmaker for the first time, pull out the removable base plate to the UV light and peel off the plastic covering. Insert the 4 UV tubes, press home firmly and re insert the base plate. Connect to a power supply and turn the unit on by pressing the  switch on the top right side of the unit to the  position and warm lamps for 1 minute before each use.

There are complete video and written instructions on the CD provided or on the website:

www.StampMakerKit.com

Step 1

Turn on Stampmaker. Open the magnetic clamp and place your imagepac in the recessed area with the word 'imagepac' in reverse, place your test negative on top 'ink side' down, place lid on top and squeeze. Insert the clamp fully, negative side facing up. Expose for 3 minutes then turn off the light. Remove the clamp from the light unit.

Step 2

Remove the pac from the clamp; you will see the hardened stamp image in the pac. Over a bowl of warm water, cut around the pac and peel off the loose top cover. Using dish soap and the brush, scrub the stamp until the liquid gel is removed and the stamp perfectly clean, then rinse.

Step 3

Place the stamp into the post exposure tray, add 1/4" of water. Insert fully into Stampmaker and turn on the light. Expose for 2 minutes to harden then switch off. Remove, dry, trim around your stamp and mount it onto a clear mount with **Cling** and start creating!

NEVER LOOK DIRECTLY AT THE UV LAMPS. POLYMER IS LIGHT SENSITIVE. KEEP UNUSED POLYMER IN ITS BOX
