

# imagepac stampmaker

## MAKING AN EMBOSSING PLATE... Step by Step...

**1** Turn on the Stampmaker. Lay the BLACK Spacer into the recessed area of the clamp.

**2** Place the emboss imagepac on top of the BLACK spacer. Ensure the word 'imagepac' is face down.

**3** To EMBOSS: Place the negative on top of the pac 'inked' side facing up.  
To DE-BOSS: Place the negative on top of the pac 'inked' side facing down

**4** Place the lid of the clamp on and squeeze the center of the clamp firmly for 10 seconds to spread the polymer evenly inside the imagepac.

**5** With the negative facing up, insert the clamp fully into the Stampmaker for 1 minute. **Use a separate timer.**

**6** After 1 minute turn off the lights, remove clamp, remove imagepac and carefully trim around the edges.

**7** Remove the top sheet of the imagepac and discard. You will see your image surrounded by liquid polymer.

**8** Over the sink, squeeze dish soap onto your image and using the brush and warm running water wash away all the excess polymer.

**9** Take care to ensure you have washed it fully to remove any traces of liquid polymer before the second exposure.

**10** Put 1/4" of cold water in the exposure tray and place the emboss in. Then put the tray into the Stampmaker for another 2 minutes to harden the polymer.

**11** After 2 minutes remove from the tray, dry, and carefully trim around the emboss. Your emboss is now ready to use

Take advantage of the beige rubber matt, included in the kit, to help with your embossing sandwich.

### Hints and Tips

Take time to practice with different 'sandwich' settings with your emboss machine. You can use the beige rubber matt included with the kit to help increase pressure on the emboss if necessary

It may help to 'spritz' your paper/card with water prior to embossing to help soften the fibres.

Try using a "positive" of your image rather than a "negative". The results are fantastic.

You can emboss into Card, Paper, Tin, Leather, Fabric etc. Let your imagination run wild...
