eCASE® AUDIT
Framework

Key Benefits

Adaptability
eCase's "Configure, don't code" design quickly adapts to new Audit and Investigation policies and requirements

Quality
Assignment tracking, standardized review and approval, and document management reduce error

Accountability
Task assignments, triggers and alerts, and audit log

Transparency
Report on all actions and data within the system, share standard reports, auto-generate required reports like ROI

Collaboration
Discussion threads and portals facilitate communication internally and with the public

Efficiency
Assignation, delegation, routing, and approvals power full lifecycle tracking of audits and investigations

Security
Establish permissions audit and investigation groups and roles

The Challenge
Many audits and investigations are currently being handled via bulky spreadsheets or scattered manual systems that lack effective records tracking, management, and retention and do not provide consistent tracking and documentation of work. Because of these decentralized processes, coordination among field agents is difficult and reports often require added effort as all relevant information must be manually compiled from a variety of sources.

## An Adaptive Audit & Investigation Solution
eCase Audit/Investigation spans the complete audit and investigation lifecycles through planning, creation, execution, reporting and compliance. eCase provides capabilities to track the workflow of audit events, artifacts, reports, recommendations, and corrective actions. Official notifications are supported throughout the process. The eCase portal enables simple coordination with geographically dispersed case auditors and investigators.

Forms Integration	**Intelligent Capture**	**Configuration**	**Collaboration Tools**	**Core Features**
Reporting & Metrics	**BPM & Workflow**	**APIs/Web Services**	**Role-Based Security**	

Existing Client Systems of Record

Configuration	Build and modify applications without coding, saving time and money
BPM & Workflow	Enables complex structured and unstructured processes and data
Forms Integration	Design and integrate forms to meet user interface needs
Collaboration	Improve decision-making and quality via discussion threads and review tools
Reporting & Metrics	Report on all data and actions, view dashboards, and schedule reports
Role-Based Security	Configure user and group permissions to all system features
Intelligent Capture	Scan and OCR for paper capture to replace manual processes
Portals	Access all applications on the platform through internal or external portal
API/Web Services	Connect to internal and external systems including systems of record
