

Hearing Loss?

Take This Simple Test

Do you...

- Have difficulty in understanding what is being said, unless you are directly facing the speaker?
- Find yourself complaining that people are mumbling or slurring their words?
- Are continually asking people to repeat words or phrases, though they feel they're speaking loud enough?
- Prefer the TV or radio louder than others do?
- Have difficulty understanding conversation within a group of people?
- Avoid group meetings, social occasions, public facilities, or family gatherings where listening may be difficult?
- Have trouble hearing at the movies, house of worship, concert halls, or at other public gatherings – especially where sound sources are at a distance?
- Have ringing in the ears or other head noises? (hissing, buzzing, crickets, etc). Tinnitus often accompanies hearing loss, but not always, and as such, may be the ears way of saying "ouch!"

If you checked at least two of these questions, you may have a hearing loss and need to have your hearing tested.

Call Don Mills Audiology to set up an appointment today.

Hearing loss can range from being very mild in nature, resulting in not hearing faint high pitched sounds or voices, to impairment that is so severe very loud noises may not be detected.

As with most other health problems, early detection allows for more effective intervention. In some cases, hearing loss is medically treatable and may be improved. In cases where the hearing loss is permanent, hearing aids are a form of treatment that allow for compensation of the hearing loss. Early detection and intervention also offers a means of support for both the hearing impaired person and his family with the social and mental burdens often associated with hearing loss.

be BY RESOUND™ A hearing device like no other

designed to disappear

be by ReSound™ looks like no other hearing instrument, is worn like no other hearing instrument and literally disappears when in the ear. Nothing bulky behind your ear to interfere with those cool sunglasses.

No other instrument available today is designed to be so cosmetically discreet.

wear and forget

Thanks to its innovative shape and ergonomic styling, be by ReSound feels like no other hearing instrument. It's so light and comfortable; you'll probably forget you're wearing it.

be by ReSound sits naturally and comfortably in the ear. This unique fitting is further enhanced by a special design feature we call MultiVenting™. This allows air to travel freely in and out of the ear, ensuring you can hear your own voice – and those of others – as naturally as possible.

be by ReSound gives you wide Open comfort.

hear the difference

Though it weighs as much as a paper clip (battery included) and sits invisibly in the ear, be by ReSound packs a seriously powerful punch. This unparalleled performance is provided by ReSound's superior technology platform: Sound by ReSound™.

Sound by ReSound is made up of three sophisticated technological elements that combine to deliver brilliant clarity, advanced elimination of whistling and the most natural listening experience available.

Yes, it's a lot of high tech mumbo jumbo. But it works. be by ReSound provides you with an unparalleled listening experience.

Traditional hearing aids are a thing of the past.
